

Supplementary Table 1

Supplementary Table 1

Paired Comparison of local Largest Lyapunov Exponent (LLE) During Stimulation vs. No-Stimulation Periods Across Adaptation Conditions

Condition	Networks	Wilcoxon p	Cohen's d	Median Δ LLE	Mean Stim local LLE	Mean No-Stim local LLE
No Adaptation	25	.035*	0.41	0.46	0.52	0.25
SFA Only	25	.001*	0.80	0.38	0.41	0.14
STD Only	25	.313	-0.21	-0.08	-0.13	0.00
SFA + STD	25	.476	-0.25	0.04	-0.02	0.03

Note. $N = 300$ neurons per network, connection density = 33%, $f \in [0.40, 0.60]$. Wilcoxon signed-rank test (two-tailed) compared mean local LLE during stimulation versus no-stimulation periods. Δ LLE = $LLE_{\text{stim}} - LLE_{\text{no-stim}}$.

* $p < .05$.
